Set Up an Amazon SageMaker Domain and User Profile

To Begin with the Lab

Summary of the Lab

To set up an Amazon SageMaker Domain and user profile, first sign in to the AWS Management Console and open SageMaker. Use the single-user quick setup to automatically configure the environment, then wait for the domain to reach “InService” status. Open the domain, add a new user profile with the existing execution role, keep default settings, and submit. Finally, locate the user profile and launch Studio to start using SageMaker.

Sign in to AWS Console.

In the search bar, type SageMaker.

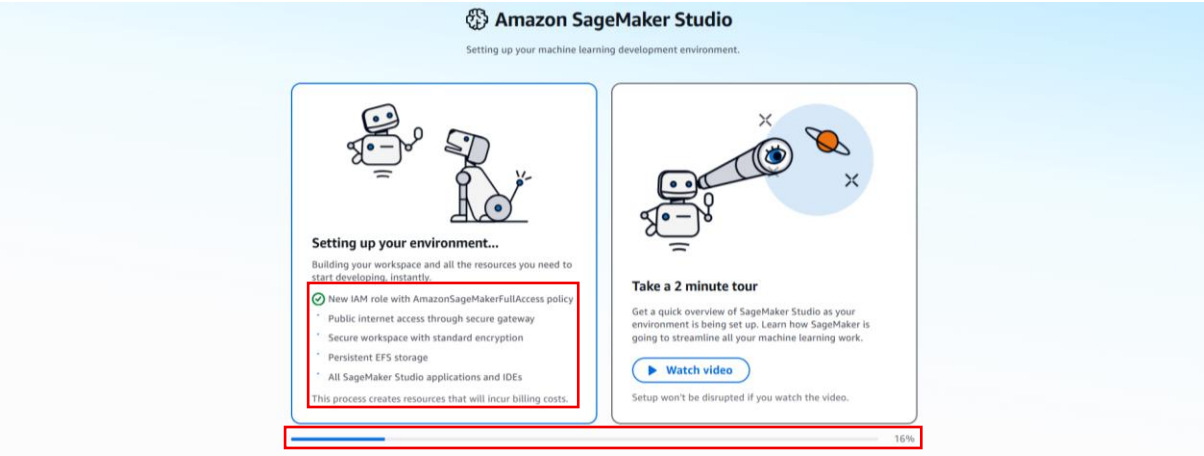
Open Amazon SageMaker.

Click on the Amazon SageMaker AI

Click on the Set up for the single user

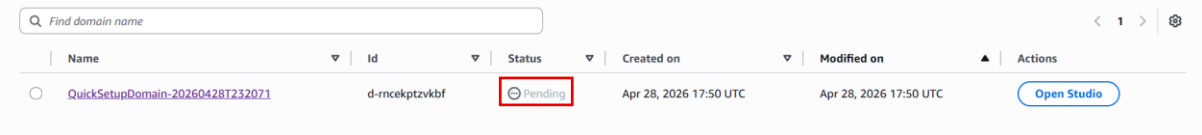
Quick setup automatically configures the basic environment.

Wait approximately **3–5 minutes** for provisioning.

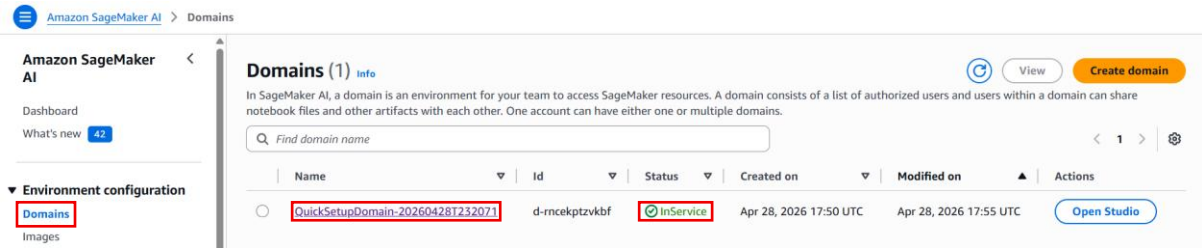


Go to Amazon SageMaker → Domains

Wait for the Domain status to become **InService.**

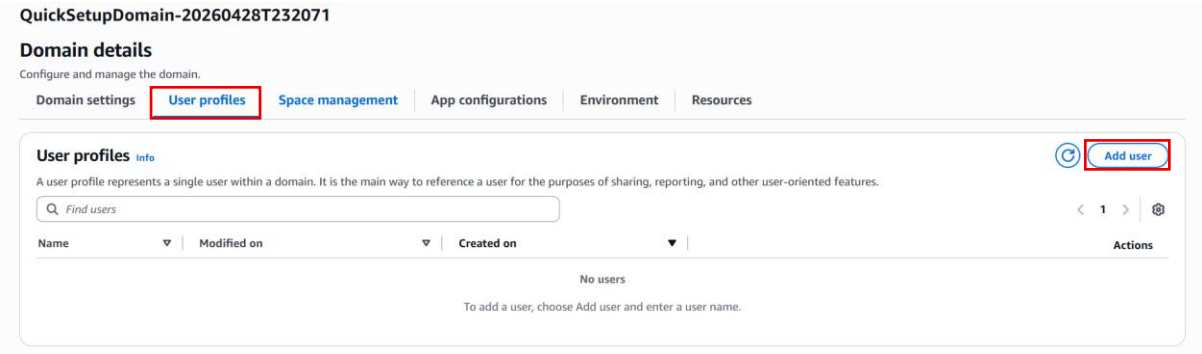


Once it is ready, Click your domain (QuickSetupDomain-...)



Click User profiles

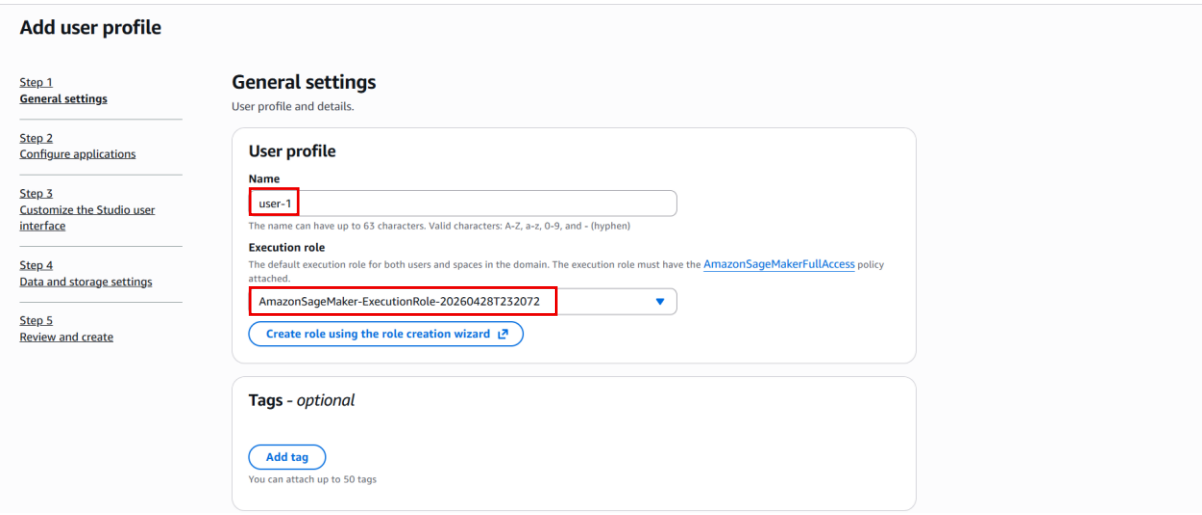
Click Add user



Enter Username

Select existing execution role created during domain setup.

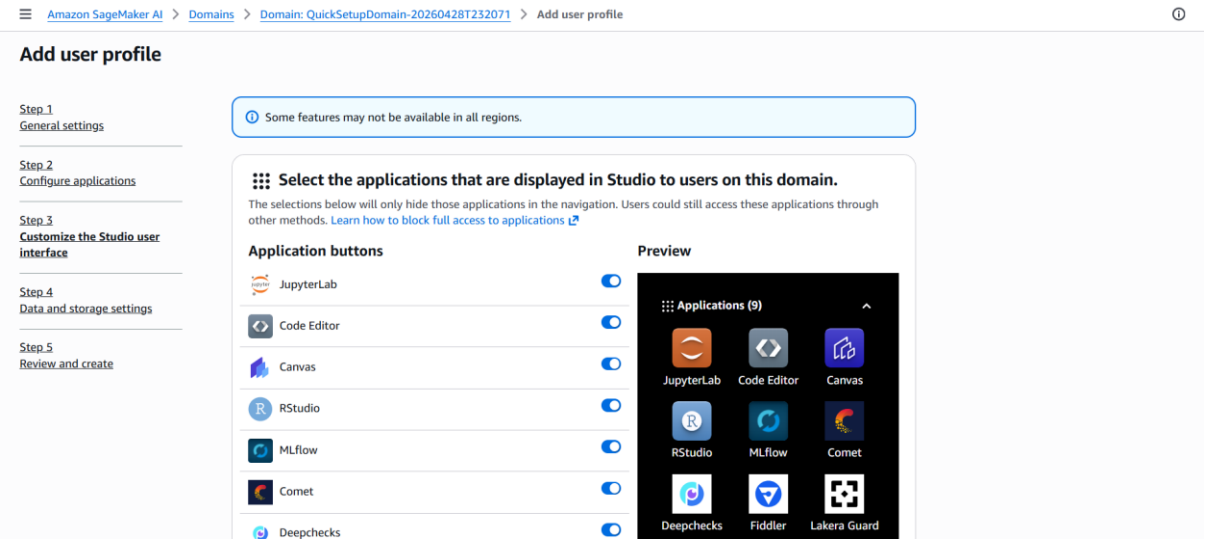
Click Next



Keep default application settings.

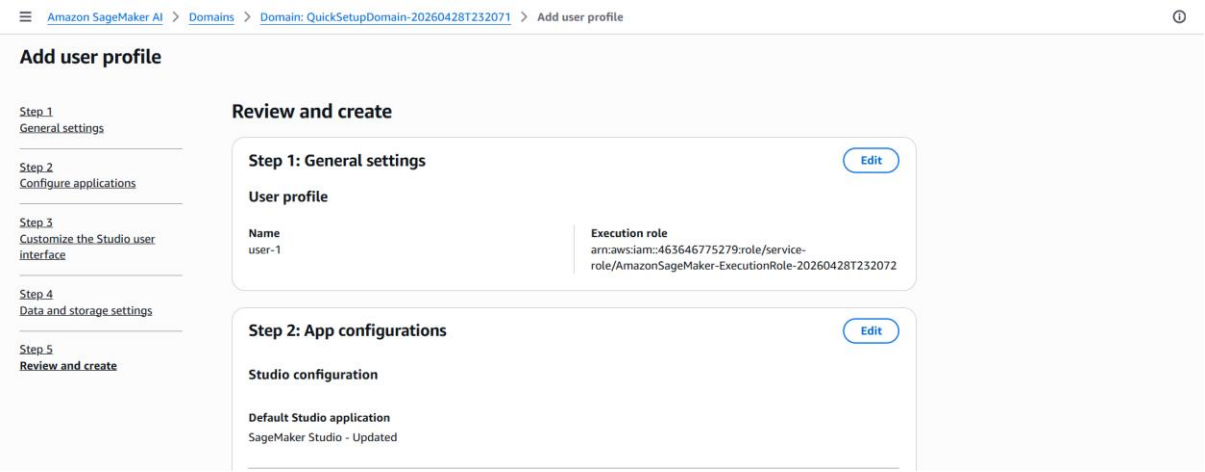
Leave all default menu/application options enabled.

Click Next.



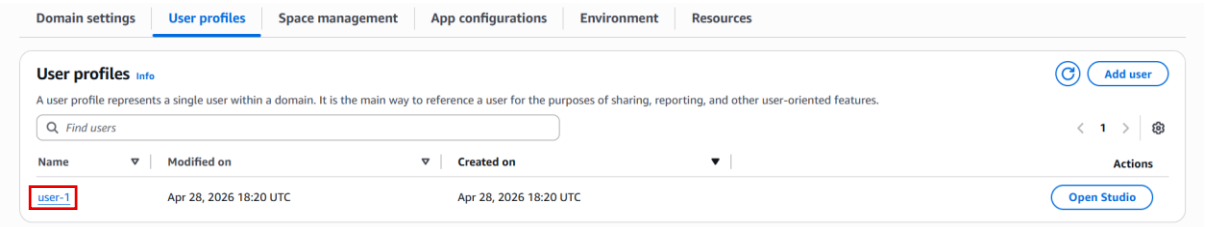
Review configuration.

Click Submit.

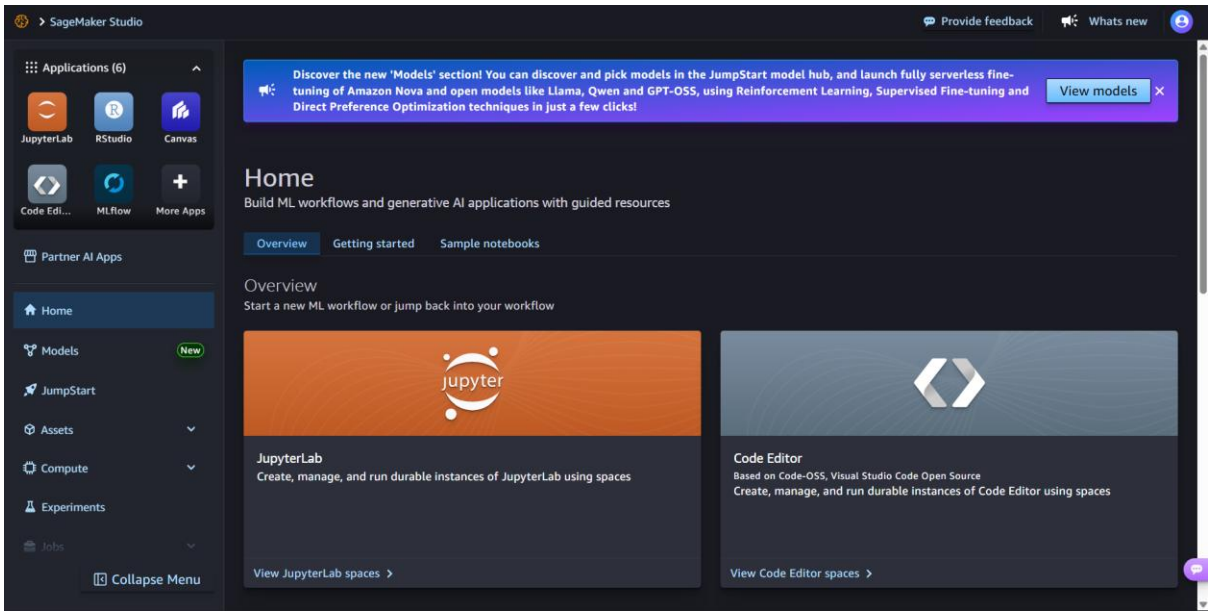


Expected Result:

New user profile user1 appears in list.



In User Profiles, locate user1.

Click Launch.


Select Studio.
