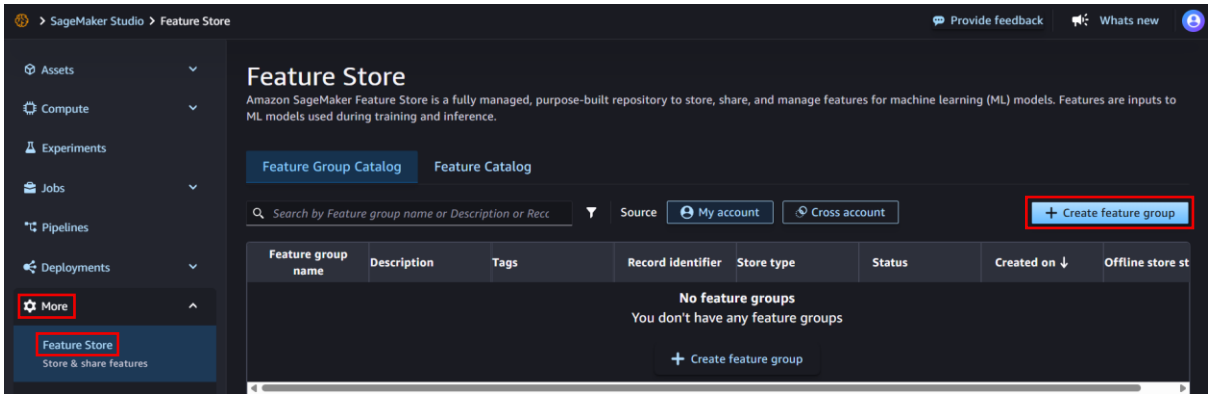
Feature Store - Creating Features & Feature Group

To Begin with the Lab

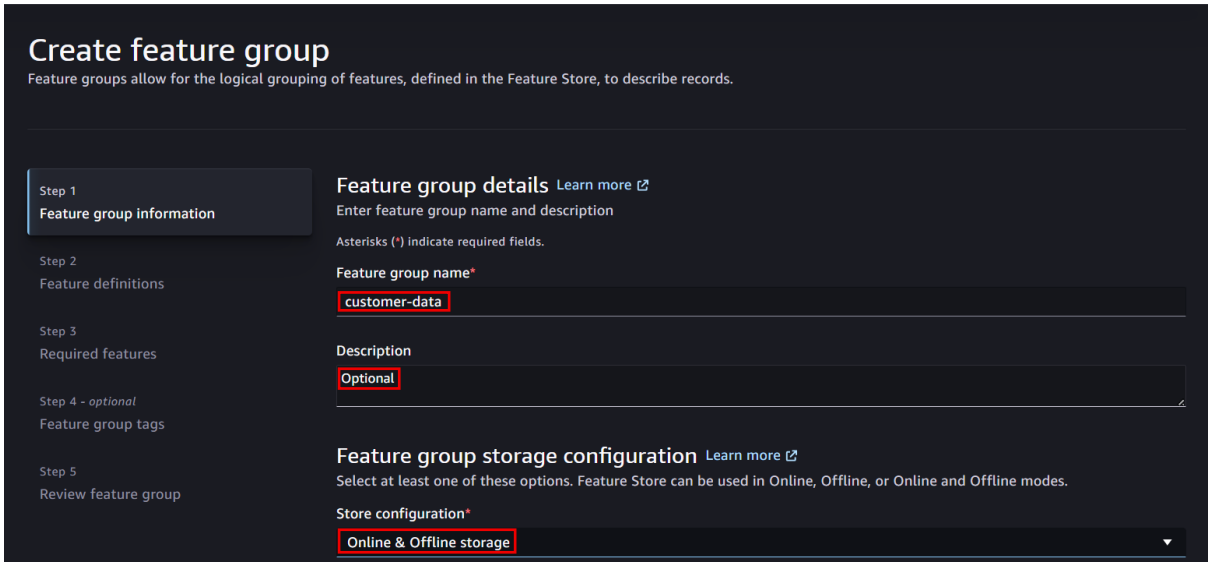
Summary of the Lab

This lab demonstrates creating and managing a Feature Group in Feature Store. Navigate to Feature Store, create a feature group named “customer-data,” and configure storage with both online and offline options using an S3 path. Set IAM role, on-demand throughput, and define features with required fields like customer_id and create_date. After reviewing and creating the group, verify it appears in the catalog, then delete it when finished.

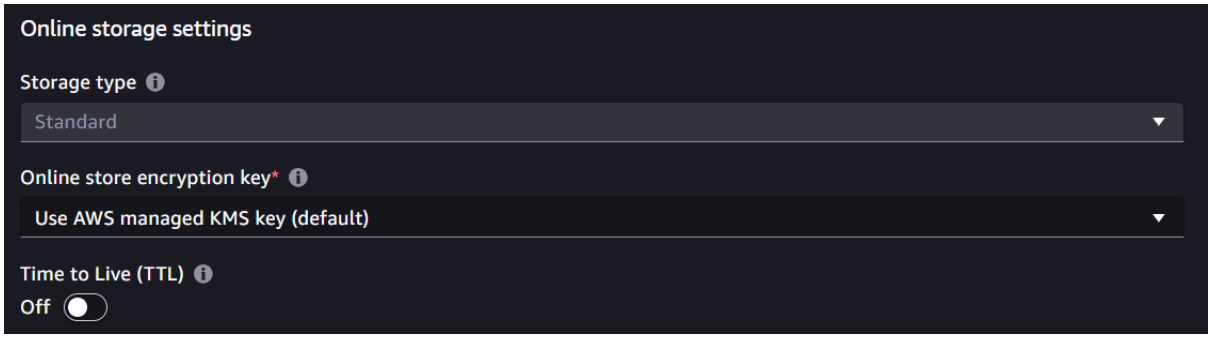
- From the left navigation panel, Go to More
- Click Feature Store.
- Create a Feature Group



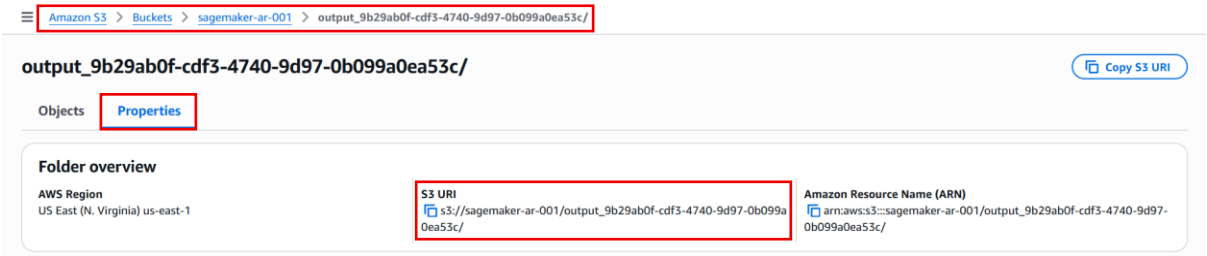
- Click Create Feature Group.
- Enter:
    - Name: customer-data
- Description: optional
- In Feature group storage configuration
- Choose:
    - Online and Offline Storage



- Encryption: Default AWS-managed key
- Time-to-live (TTL): Leave disabled (optional)

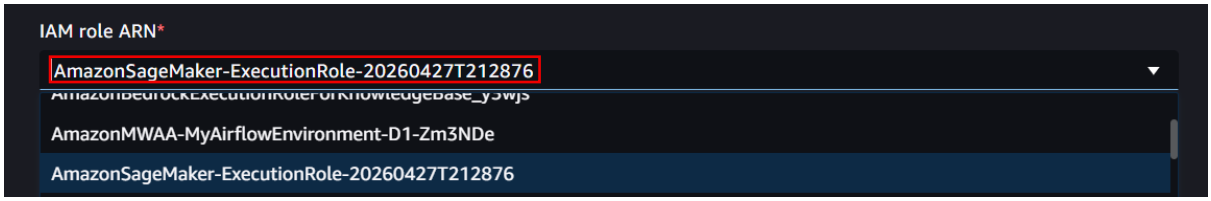


- Provide S3 location:
- Copy S3 URI from your bucket
- Paste into offline store path field

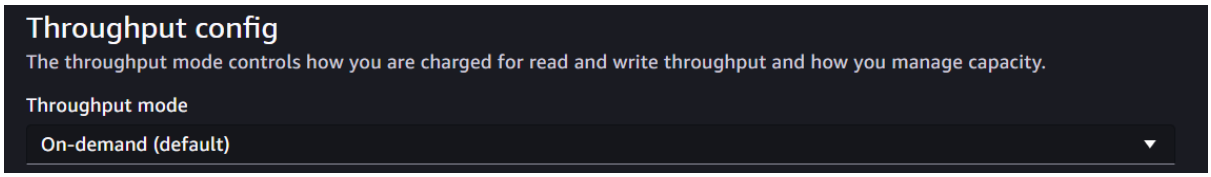


- Table format: Glue (Default)
- Metadata managed by AWS Glue
- Query via Amazon Athena

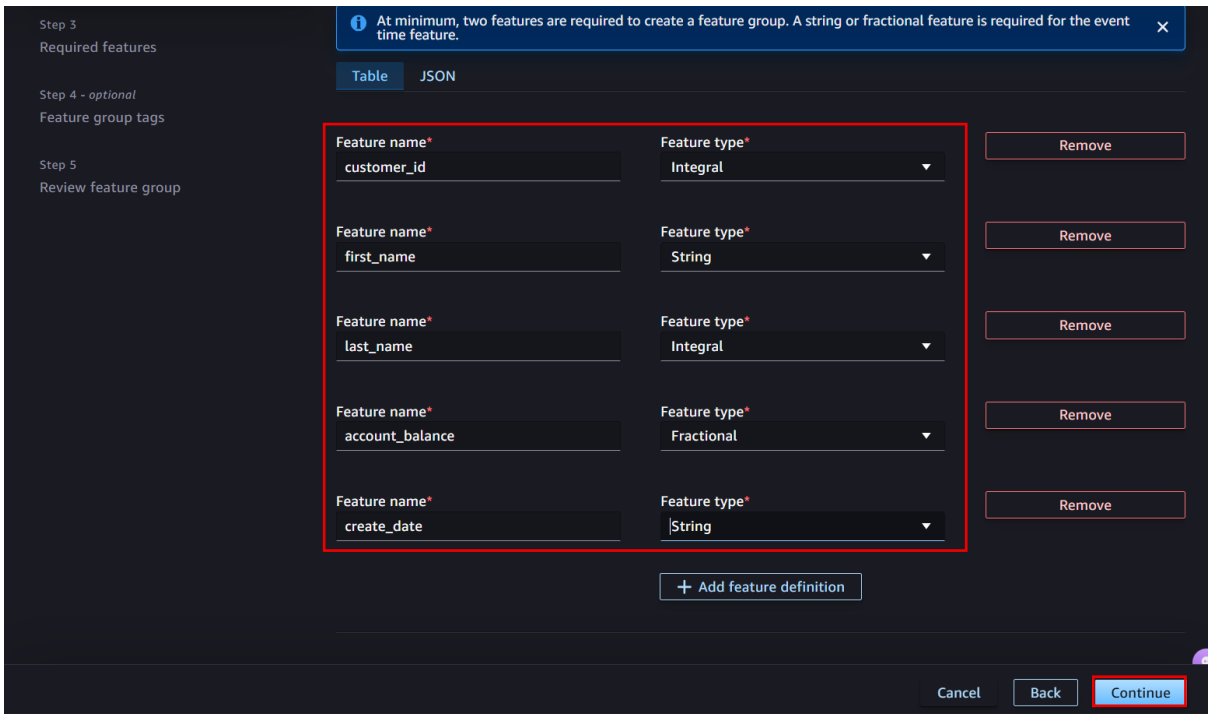
- Select IAM Role
- Choose existing execution role with required permissions



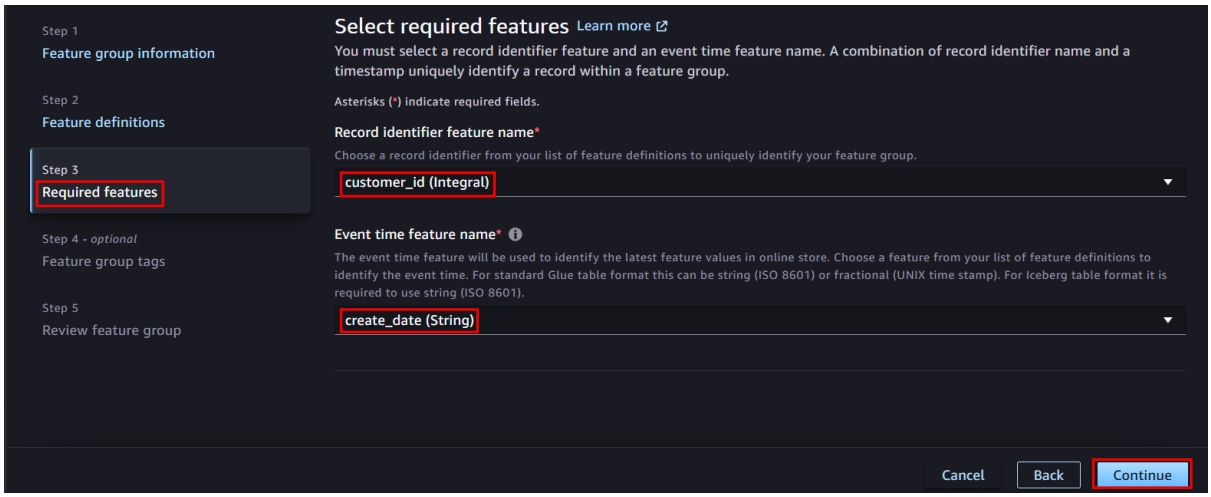
- Set Throughput
- Select On-demand



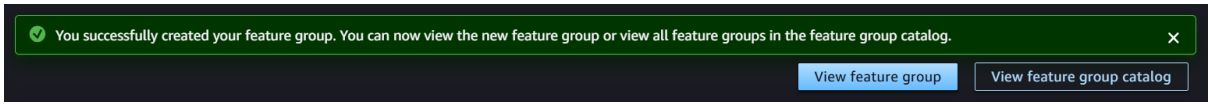
- Click Continue.
- Define Features
- Add feature columns:
- Click Continue



- Configure Required Fields
- Set:
- Record Identifier = customer_id
- Event Time Feature = create_date
- Event time helps identify the latest record for each entity.



- Review and Create
- Review configuration.
- Click Create Feature Group.



- Navigate back to Feature Store.
- Confirm feature group appears in catalog.

Feature group name	Description	Tags	Record identifier	Store type	Status	Created on ↓	Offline store st
customer-data	Optional	2 items	customer_id	both	Created	04/30/2026	

- Delete Feature Group
- Select created feature group.
- Click Delete.

customer-data
